

### Advanced *Karate Member Dates*

Enhance the Karate Member program by giving the user a choice between displaying members who have joined before a given date and members who have joined on or after the given date.

You might want to create two queries, one for each type of search. At runtime, when the user switches between the radio buttons, the event handlers can call either of the two Fill methods that you created in the TableAdapter.

The screenshot shows a Windows application window titled "Karate Member Dates". Inside the window, there is a date selection control with the text "Select a date:" followed by a text box containing "8/31/2019" and a calendar icon. Below this, there is a label "View members who joined..." followed by two radio buttons: "Before this date" (which is selected) and "On or after this date". At the bottom of the window is a table with four columns: "Last\_Name", "First\_Name", "Phone", and "Date\_Joined". The table is currently empty.

Last_Name	First_Name	Phone	Date_Joined
-----------	------------	-------	-------------
