

Karate Member Dates

Create a program that uses the Members table of the Karate database. Let the user select a date from a DateTimePicker control. The program must display all members who joined before the selected date. Use a parameterized query.

The screenshot shows a Windows application window titled "Karate Member Dates". Inside the window, there is a label "Select a date:" followed by a date picker control showing "8/29/2019". Below this, the text "Members who joined before this date:" is displayed. Underneath, there is a table with the following columns: "Last_Name", "First_Name", "Phone", and "Date_Joined". The table is currently empty of data rows.

Last_Name	First_Name	Phone	Date_Joined
-----------	------------	-------	-------------
